EDUCATION

University of Maryland

B.S. Computer Science, Minor in Economics & Philosophy

College Park, MD

Expected May 2027

- **Relevant Coursework:** Algorithms, Machine Learning, Distributed Systems, Operating Systems, Databases, Compilers
- **Programs:** YC Startup School, 2026 Cohort; USACO Gold Medalist

EXPERIENCE

Software Engineering Intern

June 2026 – Aug. 2026

OnePay

New York City, NY

- Architecting an **Ethereum staking service** covering stake initiation, validator delegation, yield accrual, and unstaking flows for a **2M user crypto platform**.
- Building a functional-typed TypeScript backend with fp-ts, publishing staking lifecycle events to **Kafka** and integrating with OnePay's wallet and banking services.
- Developing the **React Native** frontend for the end-to-end staking user experience.

Software Engineering Intern

May 2026 – June 2026

IBM

Baton Rouge, LA

- Built a **settlement-risk pattern analysis tool** in Python, surfacing recurring risk patterns over **100+ counterparties and securities**.
- Developed a weighted risk-scoring model to flag high-risk trades ahead of settlement deadlines, achieving a **2–3x lift over baseline heuristics** against historical fail data.
- Consolidated fail queue, exception log, and reconciliation datasets into a unified pipeline, reducing manual exception triage time by **10–25%** in pilot workflows.

Software Engineering Intern

June 2025 – Aug. 2025

Enfusion

New York City, NY

- Built a **multithreaded Java/Spring trading simulation engine** on AWS processing **150+ FIX TCP messages/sec**, increasing throughput by **75%** across **850+ enterprise clients**.
- Engineered a Python regression reporter integrated into Jenkins CI/CD that auto-generated HTML diffs of test output on every commit, reducing QA feedback time from **7 hours to under 5 minutes**.

Software Engineering Intern

Aug. 2024 – Nov. 2024

Sports Media Inc.

Severance, CO

- Built a **React/TypeScript** client intelligence dashboard consolidating ad campaign data, client priorities, and business needs across **500+ advertising clients** into a unified view for internal teams.
- Engineered a **Twilio recording and transcription pipeline** in FastAPI/Python to automatically extract and sync client data from inbound calls to the dashboard.

PROJECTS

CS2 Trade-Up Optimizer | Python, FastAPI, PostgreSQL, Redis, React

June 2026 – Present

- Developed a live ingestion pipeline against CS2's multi-billion-dollar virtual item marketplace, normalizing **94 collections/2,100+ float-tagged listings** into a PostgreSQL schema with point-in-time price history for EV modeling.
- Designed a search engine that finds the highest-value combination out of **100+ trillion possibilities** in under a second, then serves results through an API load-tested at **500 concurrent requests (19.5ms median response)**.

Polymarket Market Maker | Python, FastAPI, PostgreSQL, Redis, Docker

Mar. 2025 – Present

- Building an **event-driven trading system** with 7 microservices (ingestion, order book, pricing, execution, risk) that ingests live Polymarket order books over WebSocket and simulates fills with pre-trade guardrails and full PnL tracking.
- Designing a low-latency data path using **Redis** for in-memory order book state and **Postgres** for trade/position history, multiplexing **50+ markets** per WebSocket connection with indexed time-series lookups.

1Mains Audio ML Platform | Python, PyTorch, DSP, Diffusion Models, AWS

Jan. 2025 – Present

- Shipped cloud-based DSP and diffusion-model pipelines in PyTorch for audio generation and inference, serving **2,000+ active users** across **5M+ cumulative music streams**.

TECHNICAL SKILLS

Languages: Go, Java, Python, TypeScript/JavaScript, SQL, Bash, Ruby

Systems & Networking: Distributed Systems, Multithreading, Low-Latency Systems, TCP/IP, Linux, Fault-Tolerant Architecture, System Debugging, Telemetry

Testing & CI/CD: Automated Testing, Jenkins, Regression Frameworks, PyTest, JUnit, Selenium, TDD, Root-Cause Analysis, SDLC

Databases & Messaging: PostgreSQL, Redis, Kafka, MySQL

Frameworks & Tools: Spring Boot, FastAPI, React, React Native, Node.js, Docker, Kubernetes

Cloud & Infrastructure: AWS (Lambda, CloudWatch, EC2, SQS, SNS), Azure, Microservices, Observability Systems

ML & Data: PyTorch, Diffusion Models, LLM/GenAI Tooling, DSP, NumPy, SciPy, scikit-learn, Pandas
