Education

University of Maryland College Park, MD
B.S. Computer Science, Minor in Economics & Philosophy *Expected May 2027*

- **Coursework:** Algorithms, Machine Learning, Distributed Systems, OS, Databases, Compilers, Competitive Programming (C++)
- **Programs:** YC Startup School, 2026 Cohort; USACO Gold Medalist

Experience

Software Engineering Intern June 2026 – Aug. 2026
OnePay *New York City, NY*

- Architected an **Ethereum staking service** for a crypto platform serving **2M+ users** with stake initiation, validator delegation, yield accrual, and unstaking.
- Built a functional-typed **TypeScript**/fp-ts backend publishing **30K+ staking lifecycle events** through Kafka, integrated with OnePay's wallet and banking infrastructure.
- Developed the **React Native** frontend translating complex blockchain transaction states into a production staking flow.

Software Engineering Intern May 2026 – June 2026
IBM *Baton Rouge, LA*

- Built a **settlement-risk pattern analysis tool** in Python surfacing recurring risk patterns over **100+ counterparties and securities**.
- Developed a weighted risk-scoring model flagging high-risk trades ahead of settlement deadlines, a **2–3x lift over baseline heuristics** on historical fail data.
- Consolidated fail queue, exception log, and reconciliation datasets into a unified pipeline, cutting manual exception triage time by **10–25%**.

Software Engineering Intern June 2025 – Aug. 2025
Enfusion *New York City, NY*

- Built a **multithreaded Java/Spring trading simulation engine** on AWS processing **150+ FIX TCP messages/sec**, a **75%** throughput gain across **850+ enterprise clients**.
- Engineered a Python regression reporter in Jenkins CI/CD auto-generating HTML diffs on every commit, cutting QA feedback time from **7 hours to under 5 minutes**.

Software Engineering Intern Aug. 2024 – Nov. 2024
Sports Media Inc. *Severance, CO*

- Built a **React/TypeScript** client intelligence dashboard consolidating ad campaign data and client priorities across **500+ advertising clients**.
- Engineered a **Twilio** recording/transcription pipeline in FastAPI/Python to sync inbound-call data to the dashboard automatically.

Projects

CS2 Trade-Up Optimizer | *Python, FastAPI, PostgreSQL, Redis, React* June 2026 – Present

- Built a live ingestion pipeline against CS2's marketplace, normalizing **94 collections/2,100+ float-tagged listings** into a Postgres schema with point-in-time price history for EV modeling.
- Designed a search engine finding the highest-value combination out of **100+ trillion possibilities** in under a second, served via an API load-tested at **500 concurrent requests (19.5ms median)**.

Polymarket Market Maker | *Python, FastAPI, PostgreSQL, Redis, Docker* Mar. 2025 – Present

- Building an **event-driven trading system** (7 microservices: ingestion, order book, pricing, execution, risk) ingesting live Polymarket order books over WebSocket with pre-trade guardrails and full PnL tracking.
- Designed a low-latency data path — **Redis** for in-memory order book state, **Postgres** for trade/position history — multiplexing **50+ markets** per WebSocket connection.

1Mains Audio ML Platform | *Python, PyTorch, DSP, Diffusion Models, AWS* Jan. 2025 – Present

- Shipped cloud-based DSP and diffusion-model pipelines in PyTorch for audio generation, serving **2,000+ active users** across **5M+ cumulative streams**.

Technical Skills

Languages: Go, Java, C++, Python, TypeScript/JavaScript, SQL, Bash
Systems & Networking: Distributed Systems, Multithreading, Low-Latency Systems, TCP/IP, Linux, Fault-Tolerant Architecture
Databases & Messaging: PostgreSQL, Redis, Kafka, MySQL
Frameworks & Tools: Spring Boot, FastAPI, React, React Native, Docker, Kubernetes
Cloud & Infrastructure: AWS (Lambda, CloudWatch, EC2, SQS, SNS), Microservices, Observability
ML & Data: PyTorch, Diffusion Models, DSP, LLM/GenAI Tooling, NumPy, Pandas, scikit-learn
